- Modernization
- Science & Technology
- Sustainable Design
- Workplace Design
- Classified Facilities
- Corporate Headquarters
- Energy
- Historic Preservation
- Master Planning
- Monuments & Landmarks
- Student Life
- Undergraduate Science

### Building Modernization

As a fully integrated firm, EYP has modernization and historic preservation experts from all disciplines, including architecture, interior design, and structural, mechanical, electrical, fire protection and plumbing engineering. This integrated approach allows us to excel in the design and insertion of new systems into older structures not originally constructed to accommodate contemporary technologies and current building codes. With this expertise in modernization comes extensive experience in designing renovations to maintain operations and phasing of projects for occupied buildings.

### Archival Facilities

Over the course of a five-year term contract with the National Archives and Records Administration (NARA), EYP has provided design and related services to NARA facilities nationwide, the majority of the Presidential libraries, regional archives, national records centers, the National Archives Building in Washington, D.C., and all supporting facilities. Services performed under this contract include planning phase feasibility studies, building assessment reports, design programming, design, interior space planning, design reviews, inspections and post occupancy evaluations.

### Expertise Driven Design

We believe that knowledge is as critical to design excellence as creativity. Expertise – the deep knowledge that comes from research, study, and experience – enables us to harness creativity in ways that deliver exceptional value to our clients. Creativity in turn drives us to explore, question, and continuously advance our understanding of how the built environment influences human behavior and culture – and how buildings and their systems impact the natural environment. The union of expertise and creativity creates a powerful dynamic that enriches human experience.
